

## **PAK-MORE® HOLD DOWN DISKS SIGNIFICANTLY REDUCE WASTE DISPOSAL COST — UP TO 70%**

*S&G Enterprises manufactures the easy-to-use; easy-to-install; disks with the five, unique locking tabs. These are corrosion resistant, galvanized disks designed for use in standard 55 gallon drums. The remarkable disks which compact and lock-in waste material and, simultaneously, lower your disposal costs.*

*The concept of the Pak-More Hold Down Disk is amazingly simple. It was developed to answer the needs of our compactor customers to prevent materials from "springing back" or expanding in the drums.*

Engineered products for waste reduction since 1961.

Before Compaction

After Regular Compaction

Compaction Plus Pak-More Hold Down Disk

Cross sectional views of a standard 55 gallon drum showing the principle of "springback" following a typical compression and the extraordinary "locked-in" compaction using the S&G Pak-More Disk.

Material spring back obviously re-occupies valuable drum space and adds substantially to disposal costs for paper, plastics, cardboard, and hazardous waste — particularly materials exhibiting springback or "memory" characteristics.

Thus the remarkable Pak-More Hold Down Disk was created.

The disk had to be tough, durable, capable of taking great compacting pressures to reach those lowest compaction levels . . . and holding that position.

Visualize the compactor ram retracting . . . withdrawing leaving the disk in place. No problem. The disk, by virtue of five locking tabs, securely wedges itself against the drum wall.

Using one or two Pak-More Disks per drum, each disk compressing a volume of material to its lowest compaction level, you will significantly store up to 70% more waste!

Consider too, no special tools or skills are required to assemble the Pak-More Disk. Nothing complex. The disks work well with any 55 gallon drum compactor such as our 55AR Ram Flat® Compactor shown here.

To actually compact, place the Pak-More Disk over the material in the drum. Begin compaction. At the lowest level of compaction the Pak-More Disk locks in-place. No springback. Repeat compaction for capacity drum use.

The Pak-More Disk stops anywhere along the length of a 55 gallon drum — to that ultimate point of compaction. It is not necessary to lock into the drum rings for retention.

Consider this unique, important benefit. The Pak-More Disk is easily, safely removed simply by loosening the locking tabs and releasing locking pressure.

For minimal storage advantages, Pak-More Disks are shipped unassembled; however, assembly is uncomplicated — a matter of seconds.

Just how much money will your company save using Pak-More Disks? Typically, you can reduce costs of \$500 per drum to \$300! That's savings above 40%
